The State of Michigan has adopted a ban on the deposition of beverage containers and whole tires in the State’s landfills. This ban takes place in October 2004. This approach has been challenged by the Solid Waste Association of North America. I am familiar with the role of municipal solid waste recycling and reuse in conserving landfill space and protecting groundwater quality, public health and the environment from hazardous/deleterious chemicals in municipal solid wastes. I have published several papers on this topic including,

The current municipal solid waste stream contains a wide variety of known and yet-to-be-identified hazardous and otherwise deleterious chemicals that are a threat to public health and the quality of groundwater that is used for domestic and agricultural purposes. Common household items such as batteries, fluorescent bulbs, and cleaning fluids contain such hazardous chemicals. Among the waste components in municipal solid waste are a variety of heavy metals and organic compounds that are a threat to human health when ingested in drinking water. In addition, municipal solid waste contains inorganic salts and so-called “nonhazardous” organics, which, when present in landfill-leachate-polluted groundwaters, cause the groundwaters, among other impacts, to have tastes and odors that render them unusable for domestic and many other purposes.

Landfills pose substantial, unavoidable environmental impacts. Rainfall and snowmelt can enter a landfill through defects in the landfill cover. Once water enters the landfill, it interacts with waste components to produce leachate (dissolved waste components) containing hazardous and toxic substances. These substances escape the landfill through rips, tears and areas of deterioration in the liner system, and can contaminate groundwater beneath the landfill. The contaminated groundwater then moves to off-site properties, where it can pollute domestic and other water supply wells. In addition, in those situations where groundwaters are discharged to the surface through springs, surface water pollution can occur. The pollution of groundwaters and surface waters by landfill leachate is a significant threat to public health, aquatic life and wildlife. Drs. G. Fred Lee and Anne Jones-Lee’s website (www.gfredlee.com) contains several papers discussing the potential impacts of groundwater pollution by municipal solid waste landfills.
While the state of Michigan’s landfill liner and groundwater monitoring systems are designed to minimize groundwater pollution by landfill leachate, they cannot necessarily eliminate it for as long as the wastes in the landfill will be a threat. Some of the waste components in the landfill do not degrade; they are, accordingly, a threat to cause groundwater pollution forever. Improved liners may postpone contamination, but, as the U.S Environmental Protection Agency has recognized, any containment system will eventually develop defects that allow water to enter the landfill, and leachate to escape (see review by Lee and Jones-Lee 2004). While groundwater monitoring systems may detect when liner leakage occurs, there is a potential that the groundwater monitoring system will fail to reliably detect groundwater pollution at the point of groundwater pollution compliance.

In addition, landfills release air pollutants that can, in the near- and long-term, affect human health, as well as pollutants that contribute to global warming. Some of the organic waste components in municipal solid waste can be converted in a landfill into landfill gas. Methane is produced in landfills from the fermentation of some of the organics in the waste; methane is not only a potential explosive hazard to residents near landfills, but also a potent cause of global warming. Further, gaseous emissions from landfills are a threat to cause groundwater pollution. In addition, these gaseous emissions contain a variety of volatile hazardous chemicals that are a threat to cause cancer and other diseases in those living/using areas near a landfill. While landfills contain landfill gas collection systems, these systems are not fully effective in preventing landfill gas and other volatile waste components from escaping from the landfill through the landfill cover. Finally, landfills can have a variety of additional impacts, such as odors, fugitive trash, dust, vermin, birds, etc., which are deleterious to the interests of those in the sphere of influence of the landfill.

The deposition of beverage containers and whole tires in landfills unnecessarily consumes landfill space. Landfill capacity unnecessarily exhausted by discarded beverage containers and tires cannot be recovered. While State of Michigan landfills are among the most protective of landfills developed in the US, the State’s landfills still represent long-term threats to public health and the environment from gaseous and liquid releases of hazardous and deleterious chemicals derived from wastes deposited in the landfills and from waste degradation products. Every new landfill exposes the public and the environment to additional hazardous/deleterious chemicals, often at new locations where landfills are not now located.

It is appropriate for the State of Michigan to adopt regulations that restrict the deposition of municipal solid wastes in the State’s landfills that contain recyclable waste components such as beverage containers and other wastes such as whole vehicle tires that consume highly valuable landfill space. This approach is appropriate for prudent public health and environmental protection, and conservation of natural resources. It is highly appropriate to prevent the deposition of these types of wastes in a state’s landfills from all sources.

Background Information on Dr. G. Fred Lee’s Qualifications in Support of Michigan’s Ban on Beverage Containers and Whole Tires

G. Fred Lee is a principal and the president of G. Fred Lee & Associates, a specialty consulting firm focusing on problems associated with water quality, water and wastewater treatment, control of water pollution in fresh and marine waters and groundwaters, and solid and hazardous waste disposal investigation and management. He has a Ph.D. in Environmental Engineering & Environmental Science from Harvard University in Cambridge, Massachusetts, which he received in 1960. In 1957, he was awarded an M.S. Public Health degree in environmental science-environmental chemistry from the University of North Carolina (Chapel Hill) School of Public Health. He received a B.A. in environmental health science from San Jose State College in San Jose, California, in 1955. Prior to his current position with G. Fred Lee & Associates, he held numerous consulting and several university graduate-level teaching and research positions spanning over three decades. These include the position of Professor of Water Chemistry and Director of the Water Chemistry Program at the University of Wisconsin, Madison, for a period of 13 years. Subsequently, he helped organize and directed the Center for Environmental Studies at the University of Texas at Dallas, where he held the position of Professor of Environmental Engineering. He was a Professor of Civil and Environmental Engineering at Colorado State University and a Distinguished Professor of Civil and Environmental Engineering at the New Jersey Institute of Technology, where he also held the position of Director of the Site Assessment and Remediation Division at a multi-university hazardous waste research center. During his university teaching and research career, he conducted more than $5 million in research related to various aspects of water quality, including studies on behalf of the U.S. Environmental Protection Agency on the materials used as liners to contain wastes and pollutants at landfills. During that time he was also a part-time consultant to a number of governmental agencies, industry, and others in the U.S. and other countries.

In 1989, Dr. G. F. Lee retired after 30 years of university graduate-level teaching and research and expanded his part-time consulting activities into a full-time business. Over the years, he have published over 950 professional papers, chapters in books, professional reports, and similar materials, including over 80 papers and reports on the impacts of municipal and industrial waste landfills and the development of landfills that will be protective of public health, groundwater resources and the environment. Many of these papers and reports are available on Dr. Anne Jones-Lee (his wife) and his website, www.gfredlee.com. A summary of his professional activities that are pertinent to solid waste management and the evaluation of the impacts of landfills on public health and the environment is attached.

Dr. Lee has direct experience investigating the impacts of municipal solid waste landfills in Michigan. In 1984, he was selected by the State of Michigan Toxic Substances Control Commission to review the State’s solid waste landfilling regulations. He submitted a report titled, “Michigan Solid and Hazardous Waste Landfill Design Components, Investigation and Recommendation.” Further, in the 1990s, he reviewed and submitted comments to the Department of Environmental Quality on the changes proposed for the solid waste landfilling regulations in Michigan.
Expertise and Experience in Municipal/Industrial Landfill Impact Assessment/Management

Dr. G. Fred Lee’s work on hazardous chemical site and municipal/industrial landfill impact assessment began in the mid-1950s while he was an undergraduate student in environmental health sciences at San Jose State College in San Jose, California. His course and field work involved review of municipal and industrial solid waste landfill impacts on public health and the environment.

He obtained a Master of Science in Public Health degree from the University of North Carolina, Chapel Hill, in 1957. The focus of his masters degree work was on water quality evaluation and management with respect to public health and environmental protection from chemical constituents and pathogenic organisms. Dr. Lee obtained a PhD degree specializing in environmental engineering from Harvard University in 1960. As part of this degree work he obtained further formal education in the fate, effects and significance and the development of control programs for chemical constituents in surface and ground water systems. An area of specialization during his PhD work was aquatic chemistry, which focused on the transport, fate and transformations of chemical constituents in aquatic (surface and groundwater) and terrestrial systems as well as in waste management facilities.

For a 30-year period, he held university graduate-level teaching and research positions in departments of civil and environmental engineering at several major United States universities, including the University of Wisconsin-Madison, University of Texas at Dallas, and Colorado State University. During this period he taught graduate-level environmental engineering courses in water and wastewater analysis, water and wastewater treatment plant design, surface and ground water quality evaluation and management, and solid and hazardous waste management. He has published over 850 professional papers and reports on his research results and professional experience. His research included, beginning in the 1970s, the first work done on the impacts of organics on clay liners for landfills and waste piles/lagoons.

His work on the impacts of hazardous chemical site and municipal/industrial solid waste landfills began in the 1960s when, while directing the Water Chemistry Program in the Department of Civil and Environmental Engineering at the University of Wisconsin-Madison, he became involved in the review of the impacts of municipal solid waste landfills on groundwater quality. In the 1970s, while he was Director of the Center for Environmental Studies at the University of Texas at Dallas, he was involved in the review of a number of municipal solid and industrial (hazardous) waste landfill situations, focusing on the impacts of releases from the landfill on public health and the environment.

In the early 1980s while holding a professorship in Civil and Environmental Engineering at Colorado State University, he served as an advisor to the town of Brush, Colorado, on the potential impacts of a proposed hazardous waste landfill on the groundwater resources of interest to the community. Based on this work, he published a paper in the Journal of the American Water Works Association discussing the ultimate failure of the liner systems proposed for that landfill in preventing groundwater pollution by landfill leachate. In 1984 this paper was judged
by the Water Resources Division of the American Water Works Association as the best paper published in the journal for that year.

In the 1980s, he conducted a comprehensive review of the properties of HDPE liners of the type being used today for lining municipal solid waste and hazardous waste landfills with respect to their compatibility with landfill leachate and their expected performance in containing waste-derived constituents for as long as the waste will be a threat.

In the 1980s while he held the positions of Director of the Site Assessment and Remediation Division of a multi-university consortium hazardous waste research center and Distinguished Professor of Civil and Environmental Engineering at the New Jersey Institute of Technology, he was involved in numerous situations concerning the impact of landfilling of municipal solid waste on public health and the environment. He has served as an advisor to the states of California, Michigan, New Jersey and Texas on solid waste regulations and management. He was involved in evaluating the potential threat of uranium waste solids from radium watch dial painting on groundwater quality when disposed of by burial in a gravel pit. The public in the area of this state of New Jersey proposed disposal site objected to the State’s proposed approach. Dr. Lee provided testimony in litigation, which caused the judge reviewing this matter to prohibit the State from proceeding with the disposal of uranium/radium waste at the proposed location.

Beginning in the 1960s, while a full-time university professor, Dr. Lee was a part-time private consultant to governmental agencies, industry and environmental groups on water quality and solid and hazardous waste and mining management issues. His work included evaluating the impacts of a number of municipal and industrial solid waste landfills. Much of this work was done on behalf of water utilities, governmental agencies and public interest groups who were concerned about the impacts of a proposed landfill on their groundwater resources, public health and the environment.

In 1989, he retired after 30 years of graduate-level university teaching and research and expanded the part-time consulting that he had been doing with governmental agencies, industry and community and environmental groups into a full-time activity. A principal area of his work since then has been assisting water utilities, municipalities, industry, community and environmental groups, agricultural interests and others in evaluating the potential public health and environmental impacts of proposed or existing hazardous, as well as municipal solid waste landfills. He has been involved in the review of approximately 65 different landfills and waste piles (tailings) in various parts of the United States and in other countries.

Dr. Anne Jones-Lee (his wife) and he have published extensively on the issues that should be considered in developing new or expanded municipal solid waste and hazardous waste landfills in order to protect the health, groundwater resources, environment and interests of those within the sphere of influence of the landfill. Their over 50 professional papers and reports on landfilling issues provide guidance not only on the problems of today’s minimum US EPA Subtitle D landfills, but also on how landfilling of non-recyclable wastes can and should take place to protect public health, groundwater resources, the environment, and the interests of those
within the sphere of influence of a landfill/waste management unit. They make many of their publications available as downloadable files from their web site, www.gfredlee.com.

Their work on landfill issues has particular relevance to Superfund site remediation, since regulatory agencies often propose to perform site remediation by developing an onsite landfill or capping waste materials that are present at the Superfund site. The proposed approach frequently falls short of providing true long-term health and environmental protection from the landfilled/capped waste.

In the early 1990s, Dr. Lee was appointed to a California Environmental Protection Agency’s Comparative Risk Project Human Health Subcommittee that reviewed the public health hazards of chemicals in California’s air and water. In connection with this activity, Dr. Jones-Lee and he developed a report, “Impact of Municipal and Industrial Non-Hazardous Waste Landfills on Public Health and the Environment: An Overview,” that served as a basis for the human health advisory committee to assess public health impacts of municipal landfills.

In addition to teaching and serving as a consultant in environmental engineering for over 40 years, Dr. Lee is a registered professional engineer in the state of Texas and a Diplomate in the American Academy of Environmental Engineers (AAEE). The latter recognizes his leadership roles in the environmental engineering field. He has served as the chief examiner for the AAEE in north-central California and New Jersey, where he has been responsible for administering examinations for professional engineers with extensive experience and expertise in various aspects of environmental engineering, including solid and hazardous waste management.

His work on landfill impacts has included developing and presenting several two-day short-courses devoted to landfills and groundwater quality protection issues. These courses have been presented through the American Society of Civil Engineers, the American Water Resources Association, and the National Ground Water Association in several United States cities, including New York, Atlanta, Seattle and Chicago, and the University of California Extension Programs at several of the UC campuses, as well as through other groups.
SUMMARY BIOGRAPHICAL INFORMATION

NAME: G. Fred Lee

ADDRESS: 27298 E. El Macero Dr.
          El Macero, CA  95618-1005

DATE & PLACE OF BIRTH:           TELEPHONE:       FAX:
    July 27, 1933                  530/753-9630    530/753/9956
    Delano, California, USA       (home/office)    (home/office)

E-MAIL:  gfredlee@aol.com       WEBPAGE:  http://www.gfredlee.com

EDUCATION

Ph.D.  Environmental Engineering & Environmental Science, Harvard University,
       Cambridge, Mass. 1960

M.S.P.H.  Environmental Science-Environmental Chemistry, School of Public Health,
          University of North Carolina, Chapel Hill, NC 1957

B.A.  Environmental Health Science, San Jose State College, San Jose, CA 1955

ACADEMIC AND PROFESSIONAL EXPERIENCE

Current Position:
Consultant, President, G. Fred Lee and Associates

Previous Positions:
Distinguished Professor, Civil and Environmental Engineering, New Jersey Institute of
Technology, Newark, NJ, 1984-89
Senior Consulting Engineer, EBASCO-Envirosphere, Lyndhurst, NJ (part-time), 1988-89
Coordinator, Estuarine and Marine Water Quality Management Program, NJ Marine
Sciences Consortium Sea Grant Program, 1986
Director, Site Assessment and Remedial Action Division, Industry, Cooperative Center for
Research in Hazardous and Toxic Substances, New Jersey Institute of Technology et al.,
Newark, NJ, 1984-1987
Professor, Department of Civil and Environmental Engineering, Texas Tech University,
1982-1984
Professor, Environmental Engineering, Colorado State University, 1978-1982
Professor, Environmental Engineering & Sciences; Director, Center of Environmental
Studies, University of Texas at Dallas, 1973-1978
Professor of Water Chemistry, Department of Civil & Environmental Engineering,
University of Wisconsin-Madison, 1961-1973

Registered Professional Engineer, State of Texas, Registration No. 39906
PUBLICATIONS AND AREAS OF ACTIVITY

Published over 950 professional papers, chapters in books, professional reports, and similar materials. The topics covered include:

- Studies on sources, significance, fate and the development of control programs for chemicals in aquatic and terrestrial systems.
- Analytical methods for chemical contaminants in fresh and marine waters.
- Landfills and groundwater quality protection issues.
- Impact of landfills on public health and environment.
- Environmental impact and management of various types of wastewater discharges including municipal, mining, electric generating stations, domestic and industrial wastes, paper and steel mill, refinery wastewaters, etc.
- Stormwater runoff water quality evaluation and BMP development for urban areas and highways.
- Eutrophication causes and control, groundwater quality impact of land disposal of municipal and industrial wastes, environmental impact of dredging and dredged material disposal, water quality modeling, hazard assessment for new and existing chemicals, water quality and sediment criteria and standards, water supply water quality, assessment of actual environmental impact of chemical contaminants on water quality.

LECTURES

Presented over 750 lectures at professional society meetings, universities, and to professional and public groups.

GRANTS AND AWARDS

Principal investigator for over six million dollars of contract and grant research in the water quality and solid and hazardous waste management field.

GRADUATE WORK CONDUCTED UNDER SUPERVISION OF G. FRED LEE

Over 90 M.S. theses and Ph.D. dissertations have been completed under the supervision of Dr. Lee.

ADVISORY ACTIVITIES

Consultant to numerous international, national and regional governmental agencies, community and environmental groups and industries.
Municipal Solid Waste Landfills and
Groundwater Quality Protection Issues Publications

Drs. G. Fred Lee and Anne Jones-Lee have prepared several papers and reports on various aspects of municipal solid waste (MSW) management and hazardous waste management by landfilling, groundwater quality protection issues, as well as other issues of concern to those within a sphere of influence of a landfill. These materials provide an overview of the key problems associated with landfilling of MSW and hazardous waste utilizing lined "dry tomb" landfills and suggest alternative approaches for MSW management that will not lead to groundwater pollution by landfill leachate and protect the health and interests of those within the sphere of influence of a landfill. Copies of many of these papers and reports are available as downloadable files from Drs. G. Fred Lee's and Anne Jones-Lee's web page (http://www.gfredlee.com). Recent papers and reports on landfilling issues are listed below. Copies of the papers and reports listed below as well as a complete list of publications on this and related topics are available upon request.

Dr. G. Fred Lee and Dr. Anne Jones-Lee have prepared professional papers and reports on the various areas in which they are active in research and consulting including domestic water supply water quality, water and wastewater treatment, water pollution control, and the evaluation and management of the impacts of solid and hazardous wastes. Publications are available in the following areas:

Landfills and Groundwater Quality Protection

Water Quality Evaluation and Management for Wastewater Discharges

Impact of Hazardous Chemicals -- Superfund
  LEHR Superfund Site Reports to DSCSOC
  Lava Cap Mine Superfund Site reports to SYRCL
  Smith Canal

Contaminated Sediment -- Aquafund, BPTCP, Sediment Quality Criteria

Domestic Water Supply Water Quality

Excessive Fertilization/Eutrophication, Nutrient Criteria

Reuse of Reclaimed Wastewaters

Watershed Based Water Quality Management Programs:
  Sacramento River Watershed Program
  Delta -- CALFED Program
  Upper Newport Bay Watershed Program
  San Joaquin River Watershed DO and OP Pesticide TMDL Programs

Stormwater Runoff Water Quality Science/Engineering Newsletter
G. Fred Lee & Associates was organized in the late 1960s to cover the part-time consulting activities that Dr. Lee undertook while a full-time university professor. In 1989, when Dr. Lee retired from 30 years of graduate-level teaching and research, he and Dr. Anne Jones-Lee, who was also a university professor, expanded G. Fred Lee & Associates into a full-time business activity. Examples of governmental agencies, consulting firms, citizens groups, industries and others for whom G. Fred Lee has served as an advisor include the following:

U.S. Environmental Protection Agency - Various Locations  
Vison, Elkins, Seals, Connally & Smith, Attorneys - Houston, TX  
International Joint Commission for the Great Lakes  
U.S. Public Health Service - Washington, DC  
Attorney General, State of Texas - Austin, TX  
Madison Metropolitan Sewerage District - Madison, WI  
Great Lakes Basin Commission - Windsor, Ontario  
U.S. Army Environmental Hygiene Agency - Edgewood Arsenal, MD  
City of Madison - Madison, WI  
Council on Environmental Quality - Washington, DC  
National Academies of Sciences and Engineering - Washington, DC  
Water Quality Board State of Texas - Austin, TX  
U.S. General Accounting Office - Washington, DC  
U.S. Army Corps of Engineers - Vicksburg, MS  
Tennessee Valley Authority - Various locations in Tennessee Valley  
National Oceanic & Atmospheric Administration - Various locations  
Organization for Economic Cooperation & Development - Paris  
Attorney General, State of Illinois - Chicago, IL  
State of Texas Hazardous Waste Legislative Committee - Austin  
State of New Mexico Environmental Improvement Agency - Santa Fe  
New York District Corps of Engineers - New York, NY  
San Francisco District Corps of Engineers - San Francisco, CA  
Wisconsin Electric Power Company - Milwaukee, WI  
WAPORA - Washington, DC  
Reserve Mining Company - Silver Bay, MN  
United Engineers - Philadelphia, PA  
Automated Environmental Systems - Long Island, NY  
Procter & Gamble Company - Cincinnati, OH  
Inland Steel Development Company - Chicago, IL  
Kennecott Copper Corporation - Salt Lake City, UT  
U.S. Steel Corporation - Pittsburgh, PA  
Nekoosa Edwards, Inc. - WI  
Zimpro, Inc. - Rothschild, WI  
FMC Corporation - Philadelphia, PA  
Acme Brick Company - Forth Worth, TX  
Monsanto Chemical Company - St. Louis, MO  
Gould, Inc. - Cleveland, OH  
Illinois Petroleum Council - Chicago, IL  
Inland Steel Corporation - Chicago, IL  
Industrial Biotest Laboratories - Northbrook, IL  
Wisconsin Pulp & Paper Industries - Upper Fox Valley, WI
Thilmany Pulp & Paper Company - Green Bay, WI
Chicago Park District - Chicago, IL
Nalco Chemical Company - Chicago, IL
Boise Cascade Development Company - Chicago, IL
Foley & Lardner, Attorneys - Milwaukee, WI
Timken & Lonsdorf, Attorneys - Wausau, WI
Strasburger, Price, Kelton, Martin & Unis, Attorneys - Dallas, TX
Rooks, Pitts, Fullagar & Poust, Attorneys - Chicago, IL
Jones, Day, Cockley & Reaves, Attorneys - Cleveland, OH
